Non-SNAP

To get the status of a transaction, you can send a request to DOKU Check Status API. It will response with the transaction status. This method requires the transaction order.invoice_number (or Request-Id) as the identifier.

Hit Check status after 60 seconds after payment completion!

To get the status for the transaction, please ensure your application is already hit after 60 seconds after payment completion.

Transaction Status Mapping

Here is the list of status that DOKU will provide for the transaction.status:

Name

Description

Final Status

Merchant Action

Applicable for Channels

PENDING

Transaction is waiting to be paid by the customer

NO

Wait for HTTP Notification or Call Check Status API to get final status

VIRTUAL_ACCOUNT, ONLINE_TO_OFFLINE, CREDIT_CARD_AUTHORIZE, PAYLATER, EWALLET

SUCCESS

Transaction is paid by the customer

YES

-

All Channels

FAILED

Transaction is failed to be paid

NO

Generate new payment request to DOKU

VIRTUAL_ACCOUNT,CREDIT_CARD, DIRECT_DEBIT, E_MONEY, PAYLATER

EXPIRED

Transaction due date is exceeded

YES

Generate new payment request to DOKU

VIRTUAL_ACCOUNT, ONLINE_TO_OFFLINE , PAYLATER

REFUNDED

Transaction fund is refunded to merchant

YES

-

CREDIT CARD, EMONEY, PAYLATER

TIMEOUT

Transaction is timeout

NO

Call Check Status API to get final status

E_MONEY

REDIRECT

Transaction is waiting for acquirer verification

NO

Wait for HTTP Notification or Call Check Status API to get final status

CREDIT_CARD

API Request

Type

Value

HTTP Method

GET

API endpoint (Sandbox)

https://api-sandbox.doku.com/orders/v1/status/{{order.invoice_number OR Request-Id}}

API endpoint (Production)

https://api.doku.com/orders/v1/status/{{order.invoice_number OR Request-Id}}

Here is the sample of notification request header:

Copy

Client-Id: MCH-0001-10791114622547

Request-Id: e71fe02a-bfef-4af9-a6f6-2cf1f03b00e7

Request-Timestamp: 2020-11-18T08:45:42Z

Signature: HMACSHA256=vl9DBTX5KhEiXmnpOD0TSm8PYQknuHPdyHSTSc3W6Ps=

Request Header Explanation

Parameter

Description

client-id

Client ID retrieved from DOKU Back Office

request-id

Unique random string (max 128 characters) generated from merchant side to protect duplicate request

request-timestamp

Timestamp request on UTC time in ISO8601 UTC+0 format. It means to proceed transaction on UTC+7 (WIB), merchant need to subtract time with 7. Ex: to proceed transaction on September 22th 2020 at 08:51:00 WIB, the timestamp should be 2020-09-22T01:51:00Z

signature

Security parameter that needs to be generated on merchant Backend and placed to the header request to ensure that the request is coming from valid merchant. Please refer to this section to generate the signature

Signature Generation for GET Method

For GET Method, you don't need to generate a Digest. Learn more on this section.

API Response

The response will be similar to HTTP notification. Some parameters might not be presented in certain status cases, please check our Postman Collection to try it out yourself.

Virtual Account

The response will be similar to HTTP notification. Some parameters might not be presented in certain status cases, please check our Postman Collection to try it out yourself.

channel.id	string	Mandatory	The channel of the transaction
transaction.status	string	Mandatory	The transaction status to be use to update the status on merchant side Possible value: PENDING, SUCCESS, EXPIRED, FAILED
transaction.date	string	Optional	The date when the transaction is completed by the customer in ISO 8601 format (UTC + 0)

transaction.original_request_id

string

Mandatory

The request ID that sent when initiate the payment

order.invoice_number

string

Mandatory

The invoice number that sent when initate the payment

order.amount

string

Mandatory

The amount of the transaction

virtual_account_info. virtual_account_number

string

Optional

The virtual account number that used for the transaction

virtual_account_info. created_date

string

Optional

Date time of VA generated with the format of yyyyMMddHHmmss.

virtual_account_info. expired_date

string

Optional

Date time of VA generated with the format of yyyyMMddHHmmss.

virtual_account_info. reusable_status

string

Optional

Reusable status when initiate the payment

virtual_account_payment.identifier

array

Optional

List of transaction identifier that coming from the acquiring. Merchant can save these data for reference

Mandatory

The request ID that sent when initiate the payment

service.id

string

Mandatory

The service that is used for the transaction

acquirer.id

string

Conditional

The acquirer that processed the transaction. Mandatory if transaction.status value SUCCESS.

channel.id

string

Mandatory

The channel of the transaction

card_payment.card_masked

string

Conditional

The masked card number that charged for this transaction. Mandatory if transaction.status value SUCCESS or FAILED.

card_payment.approval_code

string

Conditional

Acquirer approval code for this transaction. Mandatory if transaction.status value SUCCESS or FAILED.

card_payment.response_code

string

Conditional

Acquirer response code. Mandatory if transaction.status value SUCCESS or FAILED.

card_payment.response_message

string

Conditional

Acquirer response code Mandatory if transaction.status value SUCCESS or FAILED.

card_payment.type

string

Conditional

Type for Credit Card Transaction. Mandatory if transaction.status value SUCCESS or FAILED. Possible value: SALE, INSTALLMENT, MOTO, AUTHORIZE, CAPTURE, RECURRING, REFUND

card_payment.acquiring_off_us_status

string

Mandatory

Payment acquiring_off_us_status Possible value: true, false

card_payment.request_id

string

Mandatory

Request ID for transaction

card_payment.card_type

string

Conditional

Card type. Mandatory if transaction.status value SUCCESS or FAILED. Possible value: CREDIT, DEBIT

card_payment.three_dsecure_status

string

Optional

Three dsecure status Possible value: TRUE, FALSE

card_payment.issuer

string

Conditional

Card issuer. Mandatory if transaction.status value SUCCESS or FAILED.

card_payment.transaction_status

string

Mandatory

Transaction status Possible value: SUCCESS, FAILED, PENDING

card_payment.brand

string

Conditional

Card brand. Mandatory if transaction.status value SUCCESS or FAILED.

card_payment.date

string

Optional

Transaction card date

card_payment.authorize_id

string

Optional

Transaction authorize ID

card_payment.authentication_id

string

Optional

Transaction authentication ID
